Subject: Deny Permits for Dewey-Burdock Uranium Mine

Dear EPA:

Thank you for the opportunity to comment on the Underground Injection Control Program's Draft Permits for the Proposed Dewey-Burdock Uranium Mine and Deep Disposal Wells.

The proposed mine and deep disposal wells are in an area that is documented to have faults, fractures, breccia pipes, and over 7000 old boreholes that have not been properly plugged. It will be impossible to contain mining fluids or waste liquids, and contamination of groundwater resources is very likely.

All mining contaminates. At this point in human history, with humans causing ecological disasters all over the world, we should not be creating new mines or new fossil fuel or nuclear infrastructure. These technologies contaminate at every stage.

We need to learn to live comfortably within the limits of having only one planet, limited fresh water, a certain amount of air, and other naturally existing limits.

At this point in our history, in these days of climate change, more mining and new fossil fuel and nuclear infrastructure is suicidal.
